## DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Crescent Park carousel was probably built shortly after its manufacturer Charles Looff(1852-1918) signed a lease with the park's owner for the construction and operation of the ride in April, 1895. It was extant by July, 1898, when a photograph of the structure appeared in the <u>Providence Journal of Commerce</u>.

The machine has a circular wooden platform fifty feet in diameter with four figures abreast, including 62 horses, four chariots and a camel. It is larger than the average carousel of the period, and is unusual because all the animals are of different design. Atop the center post is a large wooden eagle, approximately four feet in wingspread, covered Most of the figures probably date between 1905, when with gold leaf. Looffarrived at Crescent Park, and 1910, when he left for Long Beach, California. The rim and center facade (enclosing the driving mechanism) are in a florid neo-baroque style typical of Looff's work, but somewhat restrained for carousel panels of the period. The band organ was installed shortly after the turn of the century and was manufactured by A. Ruth and Son, a noted German manufacturer of these instruments. Repeatedly, Loof promoted the sale of Ruth's organs to accompany his carousels, and the one here was made especially for display purposes. Originally, it employed a 94 keyless organ (played by air pressure) using cardboard books; but this was replaced early on by a Wurlitzer 165 military band organ roll mechanism.

The shed, also of Looff's design, is a fourteen-sided wood frame structure, its roof supported by two rows of vertical posts and suspended in the center by steel tension rods. It is enclosed by an unadorned frame consisting of four sliding and four stationary window panels on each bay, with vertical siding below. Four bays, and originally several more, carry two sets of double-folding doors giving access to the interior. Above, each bay has three-panel stationary transom windows with border panes of colored glass. This articulation is repeated at the clerestory, on line with the inner row of posts. Orginally, the roof rose to a peak; sometime before 1909, Looff added the cupola and onion dome.

Both carousel and band organ were initially powered by steam supplied from the park's central plant. This source has been replaced by a fifteen horsepower, 550 volt, three-phase electric motor located within the structure. Lighting came from a large gas chandelier suspended over the center pole. Its fittings remain in situ. Probably by the 1920's, gas lights were replaced by 25-watt electric bulbs attached to the posts, carousel sweeps, and center facade.

The carousel and its shed remain in an excellent state of repair; recent painting of the figures and the frame as well as the shed's interior have generally conformed to the early twentieth century coloration. The carousel is prominently sited on a slight rise, at the main entrance to the park, overlooking the midway.

## STATEMENT OF SIGNIFICANCE

8 SIGNIFICANCE

The Crescent Park carousel is among the finest surviving examples of its type in the country, and a first-rate product of Charles I. D. Looff (1852-1918), one of the earliest and foremost manufactures of carousels in the United States.

A notive of Schleswig-Holstein, Looffimmigrated to New York in 1870. Although he was trained as a furniture maker, he soon began to use his spare time constructing a carousel for Balmer's Pavilion at Coney Island (1876). Looffwas probably the first man in the country both to carve the horses for these rides and to make their frames. He entered the business full-time in 1880, opening a plant at Greenpoint in Brooklyn. His operation never grew to be a large one, when compared to such other carousel makers as the Philadelphia Toboggan Company or Gustave A. Dentzel. This was partially due to the fact that Looffdid much of the carving himself, and closely supervised four assistants who joined his workshop by 1890. The quality of his work quickly earned him a considerable reputation. During his career, Looffdesigned and built carousels throughout the United States.

Several orders came from parks in Rhode Island, including Rocky Point in Warwick (ca. 1892, destroyed), Boyden Heights in East Providence (ca. 1900, moved or destroyed), and Crescent Park. Of these the Crescent Park carousel was the largest and most elaborate. Here he opened a branch factory for regional business under the supervision of Thomas Murphy. In 1905, when his Brooklyn works were condemned for new development, Looff moved to East Providence and made the plant at Crescent Park his base of operations. This was housed in an unassuming wooden building attached to the rear of the carousel (with a six-room apartment on the second floor probably serving as his living quarters). Although it had long since ceased to serve its original function, this structure remained until recently.

Once relocated in Rhode Island, Looffproceeded to embellish the Crescent Park carousel so that it could be used as a display for prospective clients. New horses were added over the next few years, each different, and each representing the latest model. Thus, the INTED STATES DEPARTMENT OF THE INTERIOR NATIONAL PARK SERVICE

carousel is extremely unusual, if not unique, in its variety. Generally, a carousel carries about five types of animals with additional differentiation coming only from color schemes. For many years, Looff's carvings have been regarded by historians of American folk art as among the most distinguished representatives of their medium. The Crescent Park carousel is a veritable museum of his work. Of further note is the fact that not only are the animals and frame of the carousel by Looff, but the shed enclosing them is of his design as well. Unlike many carousel casings of the period, Looff's structures were polygonal, reflecting the form of the machine inside. Eschewing ornament, the shed's multi-surfaced mass, and the delicate articulation of its glass panes provide an unusually restrained and forthright visual statement.

Not the least significant aspect of the carousel is its excellent state of preservation. "Carousels often have long histories of being moved from one park to another, and of alterations that have significantly changed their original character. During its eighty years of existence, the Crescent Park carousel has remained in its original location and has experienced little modification after Looffleft East Providence in 1910. A principal reason for this is that it has been owned and operated by members of the Loofffamily up through 1966. Very few carousels in the country have been so faithfully maintained and so little altered. Complete with its original shed and early twentieth century band organ and lighting, the carousel affords a nowrare example of the total experience as it was in its heyday.

Crescent Park, itself, is noteworthy among Eastern amusement parks. Started by George B. Boyden in 1886, it was one of New England's major parks for several decades, and is the oldest in continuous operation in Rhode Island. By the turn of the century, it occupied over three hundred acres, offering a large variety of rides, dining facilities for 1000 people, the region's largest dance hall, a hotel, and a number of cottages. In 1898, the <u>Providence Journal of Commerce</u> asserted it was the largest shore resort in the world under the proprietorship of a single person. An estimated 50,000 to 75,000 people visited the park each day on weekends during the peak season. Over the past quarter century, however, the park has declined in size and prestige. During the past several years, Crescent Park has TED STATES DEPARTMENT OF THE INTERIOR NATIONAL PARK SERVICE

experienced major financial difficulties. Recently its mortgage has been foreclosed and the property is slated for sale at public auction. As separate items, the animals and other carvings on the carousel are considered extremely valuable, and the possibility of this magnificent example of nineteenth century popular art being broken up is very real. Summary

The machine has a circular wooden platform 50' in diameter with four figures abreast. which makes it larger than the average carousel. No two of its 66 figures are exactly alike, another unusual characteristic. It includes 56 jumping horses in 14 sets of 4, four ornately carved charlots with dragons and serpents, and six stationary figures of camels and horses. Most of the figures probably date between 1905. when Looff arrived at Crescent Park, and 1910, when he left for Long Beach, California.

### The Carousel

The Crescent Park carousel almost surely was built shortly after its manufacturer Charles Looff signed a lease with the park's owner for the construction and operation of the ride in April 1895. It was extant by July 1898, when a photograph of it appeared in the Providence Journal of Commerce.

Each figure fits precisely into an overall design.<sup>2</sup> Each horse of each row provides a complementary stance and attitude to those to its sides as well as those in front and behind. At least every other row abreast is all white, a typical Looff pattern.

The trappings and embellishments of this jumping horse group closely match descriptions and illustrations of an 1894 Austrian Imperial Court "carrouselle." Their style is that of Looff's mature, or third and final period.

Almost equally spaced around the platform are four stationary chariots flanked on the outside by six stationary carousel figures. The two larger chariots are nearly Identical dragon-prowed gondolas originally intended to rock. The two smaller chariots feature finely carved interwined. serpents and are the work of Looff's eldest son Charles. There are no other known charlots similar to the style, quality, or carving of these examples by the younger Looff on any other carousel.

The stationary figures flanking the chariots are all much older than the jumping horses. The camel and the lone gray horse (beside the pink gondola), represent some of Looff's earliest work. Both date from 1880. They feature brass tassels and round brass rosettes with mirrored centers which show this country's first application of "jewelling."

Beginning with the Crescent Park carousel, Looff began using one or two exceptionally fine examples of his early work to fill the stationary positions. No other existing Looff carousel, however, presents Looff's own carousel history as completely, orderly, or dramatically as does this one.

، مېچې لېټه i in a star in the second star in the second star is the second star in the second star is the second star in t To Looff, the relationship between a carousel's ornamental framework and its figures. was the same as that between a painting and its frame. framework's function was to present the figures to their best advantage, not to compete with them. His frameworks were traditionally all white, accented only by a generous use of gold trim, often gold leaf. Early Looff carousel rims and timer decorations were comprised only of paintings and scenic panels. Later, mirrors were introduced, and eventually Looff carousels featured all-mirror rims. The Crescent Park carousel carries a mix of both paintings and mirrors. It was the last, and only existing, of the Looff carousels produced which carried both the older and newer Looff trademarks in rim decorations. Atop the center post is a large wooden eagle, approximately 4' in wingspread, covered with gold leaf.

The rim and center facade, enclosing the driving mechanism, are in a florid Neo-Baroque style typical of Looff's work, but somewhat restrained for carousel panels of the period. The band organ was installed shortly after the turn of the century and was manufactured by A. Ruth and Sohn, a noted German manufacturer. For a time, Looff served as their sole distributor and American representative. He promoted the sale of Ruth's organs to accompany his carousels, and the one here was made especially for display purposes. Originally, it employed a 94 keyless organ (played by air pressure) using cardboard books; but this was replaced early on by a Wurlitzer 165 military band organ roll mechanism.

The elaborate scrolls and swirls of the Crescent Park carousel band organ's facade are reproductions of their counterparts embellishing the carousel framework. This is no accident. Every Looff carousel, from at least the Crescent Park model forward, was equipped with one of these large Ruth organs. Although its original 300 or so pipes are still intact and fully functional, its operating mechanism was converted several years ago into an automatic device which uses only a small range of the organ's potential.

Both carousel and band organ were initially powered by steam supplied from the Park's central plant. This source has been replaced by a 15-horsepower, 550-volt, 3-phase electric motor within the pavilion. Artificial lighting came from a large gas chandelier suspended over the centerpole; its fittings remain in situ. Probably by the 1920s, the gas lights were replaced by 25-watt electric bulbs attached to the posts, carousel sweeps, and center facade.<sup>3</sup>

### The Shelter<sup>4</sup>

1.15

Specially designed pavilions to permanently house carousels are an American innovation, probably Looff's, although it was widely copied by others. In this case, Looff's design is a 14-sided wood frame structure, its roof supported by two rows of vertical posts and suspended in the center by steel tension rods. It is enclosed by an unadorned frame consisting of four sliding and four stationary window panels on each bay, with vertical siding below. Four bays, and originally several more, carry two sets of double-folding doors giving access to the interior. Above, each bay has 3-panel stationary transom windows with border panes of colored glass. This articulation is repeated at the clerestory, on line with the inner row of

posts. The multi-colored panes project rays of colored light onto the moving, mirrored surfaces of the carousel's framework and figures. This illumination by natural light was developed at a time before electrical illumination was practical. Vents at the tip of the conical roof, many upper-level windows, ground-level doors, and the spinning carousel itself all combined to form a primitive, but welcome, air conditioning system. Orginally, the roof rose to a peak; sometime before 1909; Looff added the cupola and onion dome.

. 41.

The carousel and its shed remain in an excellent state of repair; recent painting of the figures and the frame as well as the shed's interior have generally conformed to the early 20th-century coloration. The carousel is prominently sited on a slight rise.

Summary

The Crescent Park carousel is the largest, most elaborate, and probably best preserved of the surviving works of Charles I. D. Looff, one of the earliest and foremost manufacturers of carousels in the United States. Because it served as his "showroom" carousel during the time he was headquartered in East Providence (1905-10), it bears some of the finest examples of his carving.

Very few carousels in the country have been so little altered. Complete with its original shed and early 20th-century band organ and lighting, this carousel affords a now-rare example of the carousel experience as it was in its heyday.

Crescent Park probably is also the oldest extant and one of a handful remaining of the more than 100 carousels Looff built during his lifetime.<sup>1</sup> (The Looff Carousel at the Santa Cruz Beach Boardwalk, from 1911, is included, along with the Looff coaster there, elsewhere in this study; its shelter is not original. The Looff Hippodrome [1916] at the Santa Monica Pier survives and has been restored; it is also included in this study. It no longer has a Looff carousel in it, however.)

#### History

A native of Schleswig-Holstein, Looff immigrated to New York in 1870.<sup>2</sup> Although he was trained as a furniture maker, he soon began to use his spare time constructing a carousel for Balmer's Pavilion at Coney Island, New York (1876). The first on Coney Island, it was wildly popular with the public. Looff was probably the first man in the country to both carve the horses for these rides and to make their frames. He entered the business full-time in 1880, opening a plant at Greenpoint in Brooklyn. His operation never grew to be a large one, when compared to such other carousel makers as the Philadelphia Toboggan Company or Gustave A. Dentzel, although during his career Looff designed and built carousels throughout the United States. He did much of the carving himself, and closely supervised assistants who joined his workshop. The quality of his work quickly earned him a considerable reputation.

Several orders came from parks in Rhode Island, including Rocky Point in Warwick (c. 1892, destroyed), Boyden Heights in East Providence (c. 1900, moved or destroyed), and Crescent Park.<sup>3</sup> Of these the Crescent Park carousel was the largest and most elaborate. Here he opened a branch factory. In 1905, when his Brooklyn works were condemned, Looff moved to East Providence and made the plant at Crescent Park his

Once he had relocated in East Providence, Looff embellished the Crescent Park carousel so that it could be used as a display for prospective clients, although it remained a working carousel. New horses were added over the next few years, each different, and each representing the latest model. Thus, the carousel is extremely unusual, if not unique, in its variety, for a carousel generally carries about five types of animals, with additional differentiation coming only from color schemes.

The Crescent Park carousel is a veritable museum of Looff's work. Of further note is the fact that not only are the animals and frame of the carousel by Looff, but the shed enclosing them is of his design as well. Unlike many carousel houses of the period, Looff's structures were polygonal, reflecting the form of the machine inside. Eschewing ornament, the shed's multi-surfaced mass and the delicate articulation of its glass panes provide an unusually restrained and forthright visual statement.

Another exceptional aspect of the carousel is its excellent state of preservation. Carousels often have histories of being moved from one park to another, and of alterations that have significantly changed their original character. During its existence, the Crescent Park carousel has remained in its original location and experienced little modification after Looff left East Providence in 1910. A principal reason for this is that it was owned and operated by Looff's children and grandchildren until 1967.

Crescent Park, itself, was noteworthy among Eastern amusement parks. Started by George B. Boyden in 1886, it was one of New England's major parks for several decades, and was the oldest in continuous operation in Rhode Island. By the turn of the century, it occupied more than 300 acres, offering a large variety of rides, including as many as four carousels at once; dining facilities for 1,000 people; the region's largest dance hall; a hotel; and a number of cottages. An estimated 50,000 to 75,000 people visited the park each day on weekends during the peak season.

Over the past quarter century, however, Crescent Park declined in size and prestige. During the 1970s, it experienced financial difficulties. By 1979, it appeared that the Park would be sold at auction and the carousel removed, sold, or broken up. A determined local group of concerned citizens, Save Our Carousel, Inc. (subsequently reorganized as the Crescent Park Carousel. Preservation Association), sought to retain and restore the carousel in the community. Although the Park itself has been sold and its other features removed, the Association was able to convince the city to deed the carousel and its immediate site to the Association.

As of late 1985, the Association had completed refurbishing the Looff pavilion and was making progress on restoring the carousel's figures, a notably expensive proposition.<sup>4</sup>

### Footnotes

<sup>1</sup>This conclusion is based on a review of the Looff entries in the <u>National Carousel</u> Association Census (Los Angeles, Calif.: 1983).
